

CLIENT: ilume™

CLIENT SUMMARY:

ilume™ is a Melbourne founded and owned pet nutrition company that manufactures and supplies healthy chef made pet food. Their integration of ground-breaking technology helps to track and maintain an eating and wellness plan for pets delivered to the customer's door.

CLIENT NEED:

- To build a high end pet food processing and multi-functional cold storage facility.

TIMEFRAME:

- The project timeframe took four months and was commissioned in late 2021.

SOLUTION:

PBBG was engaged by ilume™ to construct a specialised internal fit out of a pre-existing warehouse. The site required a change of use and essential services upgrades, and Primesafe accreditation in order to facilitate food production and storage.

The facility design incorporated air locks, dryer room, food processing and wash down capabilities. In addition, PBBG provided ilume™ with the flexibility of converting rooms built for freezer and chiller storage, meaning the client can adjust operations and production as demand requires.

"The PBBG team, together with RMR Process, were able to manage a shifting landscape of restrictions, industry shutdowns and material supply challenges, all while keeping to our budget and timeline. Paul Brady Building Group were able to utilise their extensive professional network and strong relationships in the industry to ensure a smooth supply of contractors and materials.

The resulting state of the art facility is testament to their status as industry leading builders in the food facilities and cold storage space."

– Ridmi Rathnasooriya, ilume™
